PROFESSIONAL TECHNIQUE GUIDE

Acrylic Application Guide

BLOM Cosmetics Acrylic Powders feature a beautifully buttery, creamy, self-levelling consistency that supports smooth application, excellent control and beautifully sculpted nails. For optimal performance and retention, follow the recommended application procedure below.

01 REMOVE EXISTING PRODUCT

- Carefully remove all previous nail products using the appropriate removal method.
- Soak off existing product where necessary and suitable.
- Ensure the natural nail is free from lifting, remaining product and debris before proceeding.

02 NATURAL NAIL PREPARATION

- Gently push back the cuticles and thoroughly remove non-living tissue from the nail plate.
- Carefully remove the natural shine from the nail plate using a suitable sanding band.
- At BLOM Cosmetics, our preferred sanding band is **150 grit**, used with extremely light pressure by trained professionals. Adjust to a finer grit where necessary to avoid natural-nail damage.
- Pay attention to the cuticle area and sidewalls without over-filing the natural nail.

PROFESSIONAL TIP

Correct preparation is essential for excellent acrylic retention. Never over-file or thin the natural nail plate.

03 CLEANSE THE NAIL PLATE

- Thoroughly remove all filing dust.
- Cleanse the entire nail plate using **BLOM Cosmetics Cleanser**.
- Ensure the nail plate is completely clean and dry before continuing.

04 APPLY SUPERBOND VITAMIN PRIMER

- Apply **ONE exceptionally thin layer** of BLOM Cosmetics Superbond Vitamin Primer to the natural nail.
- Our vitamin-infused Superbond Primer has a thicker consistency. Avoid excessive application or flooding the cuticle and sidewall areas.
- Allow the primer to settle and dry according to product instructions before proceeding.

IMPORTANT

Only one thin layer of our Superbond Vitamin Primer is required. Excessive primer may negatively affect product performance.

05 ACRYLIC APPLICATION

- Using your BLOM Cosmetics Acrylic Brush, pick up an appropriately sized acrylic bead with the correct liquid-to-powder ratio.
- Place and gently guide the bead into position using controlled brush movements.
- Build the nail structure, apex and desired length while maintaining a balanced, even application.
- Allow the beautifully buttery, self-levelling formula to support smooth blending and precise placement.
- Keep all acrylic products away from the surrounding skin.

06 DRYING, FILING & SHAPING

- Allow the acrylic to harden completely before filing.
- File the nail into the desired shape, refining the sidewalls, free edge, surface and overall structure.
- Smooth and refine the nail to achieve a balanced finish.
- Thoroughly remove all filing dust before applying the top coat.

07 PROFESSIONAL TIP FOR DARK ACRYLIC COLOURS

- With black or dark acrylic shades, fine filing marks can sometimes remain visible after shaping.
- If needed, apply a small amount of **BLOM Cosmetics Prep** to the filed acrylic surface, then let it evaporate completely before applying top coat.

IMPORTANT - DARK COLOURS

Do not apply BLOM Cosmetics Superbond Vitamin Primer over the filed acrylic or directly underneath top coat. If necessary, use **Prep only** before the top coat.

08 TOP COAT APPLICATION

- Apply a smooth, even layer of BLOM Cosmetics Top Coat.
- Ensure complete coverage without flooding the cuticle or sidewalls.
- Seal the free edge where appropriate.
- Cure according to the specific top coat instructions using a compatible, properly functioning nail lamp.

OPTIONAL STEP / ULTRABOND BASE GEL FOR ADDITIONAL RETENTION

For clients who require additional reinforcement or experience retention challenges, BLOM Cosmetics Ultrabond Base Gel may be incorporated into the acrylic application system.

- **1.** Complete the natural nail preparation and cleansing process.
- **2.** Apply one very thin layer of BLOM Cosmetics Superbond Vitamin Primer.
- **3.** Apply a thin, even layer of BLOM Cosmetics Ultrabond Base Gel, avoiding skin contact.
- **4.** Cure for **60 seconds** using a compatible lamp verified to cure the product correctly.
- **5.** Continue with normal BLOM Cosmetics acrylic application.
- **6.** File, shape and finish as usual.

PROFESSIONAL TIP

The optional base gel layer may offer additional support and improve retention for certain clients when correctly applied. Proper preparation, complete curing and application technique remain essential.

THE BLOM COSMETICS DIFFERENCE

- **Beautifully buttery consistency** - Smooth, creamy application and exceptional workability.
- **Self-levelling formula** - Helps create a more even surface with less effort.
- **Excellent sculpting control** - Ideal for building nail structure and precise shaping.
- **Professional-quality results** - Designed for technicians who value performance, consistency and beautiful finishes.

Beautiful nails begin with the correct preparation, precision application and products you can trust.
